

1. The University of Virginia's total foreign gifts are below the average and above the median of all institutions in America. Furthermore, they are below the peer institutions that were identified. Viewing the gift types of the peer institutions who received more funding than UVA, the Office of Development should focus on finding more contracts as those who had significantly more funding also had significantly more contracts. Looking across all academic institutions, the Office should focus on building relationships with potential donors in the countries Saudi Arabia, Qatar, and China.

2. Foreign giftors from across the world donated gifts to US institutions in three different forms: real estate, contract, and monetary gifts. In this analysis the following assumption is made: Foreign Gift Amount in the data are in dollars. The top five donors are Qatar (\$2,706,240,869), England (\$1,464,906,771), China (\$1,237,952,112), Saudi Arabia (\$1,065,205,930), and Bermuda (\$899,593,972). England and China place in the top two for counts of gifts (not the total dollar amount) made.

Carnegie Mellon University received the highest dollar amount in gifts while University of California, Los Angeles placed as number one in number of gifts that were given to one academic institution. Carnegie Mellon received the majority of its donation from the country of Bermuda. Interestingly the largest amount a country donated to one institution is between Qatar and Cornell University. Across all institutions the mean amount received is \$52,202,878 and the median is \$6,486,791 .

UVA received \$22,189,238 in total and its top three giftors include AstraZeneca, Intrnl Centre Diarrheal Disease, Haydom Lutheran Hospital d/b/a Hayd. UVA, when compared to peer institutions such as other universities in Virginia (average across Virginia universities: \$38,392,997), UNC, and University of Michigan Ann Arbor, performs lower in terms of dollars received. Compared to the overall market, UVA is below average in terms of the mean and above for the median.

3. Given the aforementioned results, UVA should target Saudi Arabia, Qatar, and China. Currently, UVA does not receive any gifts from the three countries. Looking at Virginia Commonwealth University and George Mason University, building relationships with institutions located in Qatar and Saudi Arabia point to high returns.

Additionally when comparing UVA's gift types to its peer institutions, Virginia has significantly less contracts suggesting that investing in contract relationships can help improve donation amount. Finally analyzing the relationships between Carnegie Mellon and Bermuda as well as Cornell University and Qatar may be beneficial as it can give insight to how one institution is able to receive large sums of funding from one location.

4. UVA has potential to rapidly grow its donation base. While the university performs above average (using the median) compared to the entire market, it can look to peer institutions such as VCU and GMU and take inspiration from their strategies. One key insight from this analysis is that UVA is missing out on Qatar. Qatar is the largest donor and the largest portion of VCU donation comes from the Qatar Foundation. By focusing on building relationships with the identified countries, Virginia's Office of Development should feel confident in their future.
